

MEDITECH's

Anesthesia Interface Suite

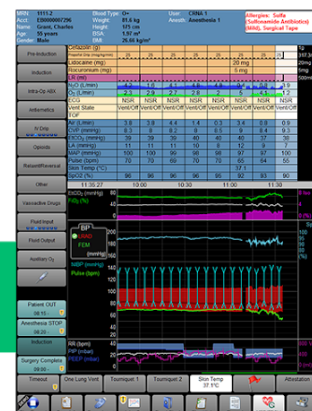

Solutions for Safe Anesthesia Management

MEDITECH's Anesthesia Interface Suite enables organizations using MEDITECH's 6.15 and Expanse EHRs to achieve safe and efficient anesthesia management by exchanging critical patient information with a variety of Anesthesia Information Management Systems (AIMS). In conjunction with MEDITECH's comprehensive EHR, inherent device connectivity provided by an AIMS provides care teams with a complete clinical and medication record to support patient safety and improved outcomes. Additionally, workflow automation, increased charge capture, and time-saving processes can provide extensive financial savings.

ADT, Allergies, Vitals, Labs, Scheduling, Medications (administered and home medications)

Anesthesia report (text and graph), Allergies, Vitals, Medications (administered* and home medications), Billing, Problems

(The image above depicts a sample of data exchange between MEDITECH Expanse and Spectrum Medical's AIMS)

Data Exchange
