

# MEDITECH Enabling Sharing of Apple Health app Data with Providers

Through our work to integrate this new feature into Expanse, patients of participating organizations will now have the option to share certain health information (including activity, steps, ECG, blood pressure, labs and immunizations) stored in the Apple Health app directly with their care providers. This functionality will be available this Fall with Apple's release of iOS 15. This feature will give providers a more holistic view of a patient's health outside of the healthcare organization, leading to richer, better-informed conversations between patients and their healthcare team.

**If you're already enrolled in Health Records on iPhone then enrollment is simple.**

## Prerequisites

- Be LIVE with Expanse
- Update to 2.2 priority pack 13 or 2.1 priority pack 26

## How to Get Started

1. Complete **this form** to indicate your desire to move forward with this integrated feature.
2. MEDITECH is automatically notified of your intent.
3. MEDITECH will open a WPCM Chart task to begin the process.

If you are not currently enrolled in Health Records on iPhone, please follow the process [here](#). For more information on Health Records on iPhone, see our [flyer](#).
