

MEDITECH

Empower Your Community with Health Records on iPhone®

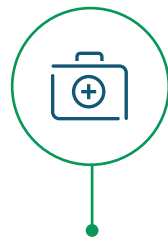

MEDITECH is empowering consumers with access to their health information through [Health Records on iPhone](#). The feature is a secure option for consumers to take their health information with them, wherever they go. It's convenient, simple to use, and helps people better understand their health. And with iOS 15, MEDITECH will be among the first vendors to enable patients sharing health data with their care providers from their Health app. This integration, which is embedded in physician workflow, can help lead to more meaningful conversations between patients and providers regarding their health and wellness.

One Record of Care

Patients' records are aggregated across participating organizations and EHRs, simplifying access to, and understanding of, their health information. With iOS 15, patients can securely share certain health data from the Health app with participating healthcare organizations of their choosing.

By the Numbers

85% of patients using online medical records deemed them useful for monitoring their health.¹

90% of patients said access to Apple Health Records enhanced their understanding of their own health and communications with clinicians and family caregivers.²

What's Available

With the Health Records on iPhone, patients can see health records in one place, including:

- Allergies
- Clinical Vitals
- Conditions
- Lab Results
- Medications
- Immunizations
- Procedures

The Health app gathers health and fitness data (such as activity data, cycle tracking, blood pressure, weight, heart rate, sleep data, and more) from iPhone, Apple Watch, and apps to view in one place.

With the Health app's new Sharing tab, available in iOS 15, patients and physicians alike can enjoy timely access to health data from the Health app.

Key Benefits

Patients

- + Share health data securely with their providers from the Health app on iPhone.
- + Their providers can see a more holistic view of their health.

Physicians

- + Seamlessly access patient Health app data from within their native workflow — no separate sign on required.
- + Review the health and fitness information for more holistic care and informed patient conversations.

Healthcare Organization

- + Offering patients the latest leading-edge technology helps support patient recruitment and retainment.
- + Easy deployment, with no fees to the healthcare organization or patient.

Convenient and Secure

Secure

Uses the latest industry standard FHIR® APIs and end-to-end encryption both in transit and at rest.

Easy to Use

Supports seamless access and timely updates from within patient and provider workflows.

Cost Effective

No additional fees or added implementation expenses to deploy.
