

Expand your possibilities with **MEDITECH Cloud Platform**

Healthcare organizations of all sizes can now increase the power and usability of their EHRs with **MEDITECH Cloud Platform**, our new bundle of scalable solutions that extend and enhance your EHR to include multiple specialties, connect remote sites, and keep patient data secure through a cost-effective subscription model.

With **Expansive Patient Connect, Expansive NOW, Expansive Transport, High Availability SnapShot, and Virtual Care**, you will experience a quick deployment, featuring an agile development environment so you can meet your goals efficiently.

These solutions leverage Google Cloud capabilities including compute, storage, data and analytics, and security and identity management solutions, alongside existing on-prem solutions, to provide high availability and continuity of care in a secure and scalable service. Through our cloud-based service, these resources can be easily accessible to critical care staff and improve healthcare continuity across MEDITECH-powered healthcare organizations.

Possibilities Realized

Patient & Provider Satisfaction

Attract top physicians with sophisticated tools that are convenient and as easy-to-use as their smartphones.

Thriving Organizations

Lower your overhead through flexible subscription pricing. Focus resources on your core business, and spend less energy managing servers and having to pay for unused hardware space.

Peace of Mind

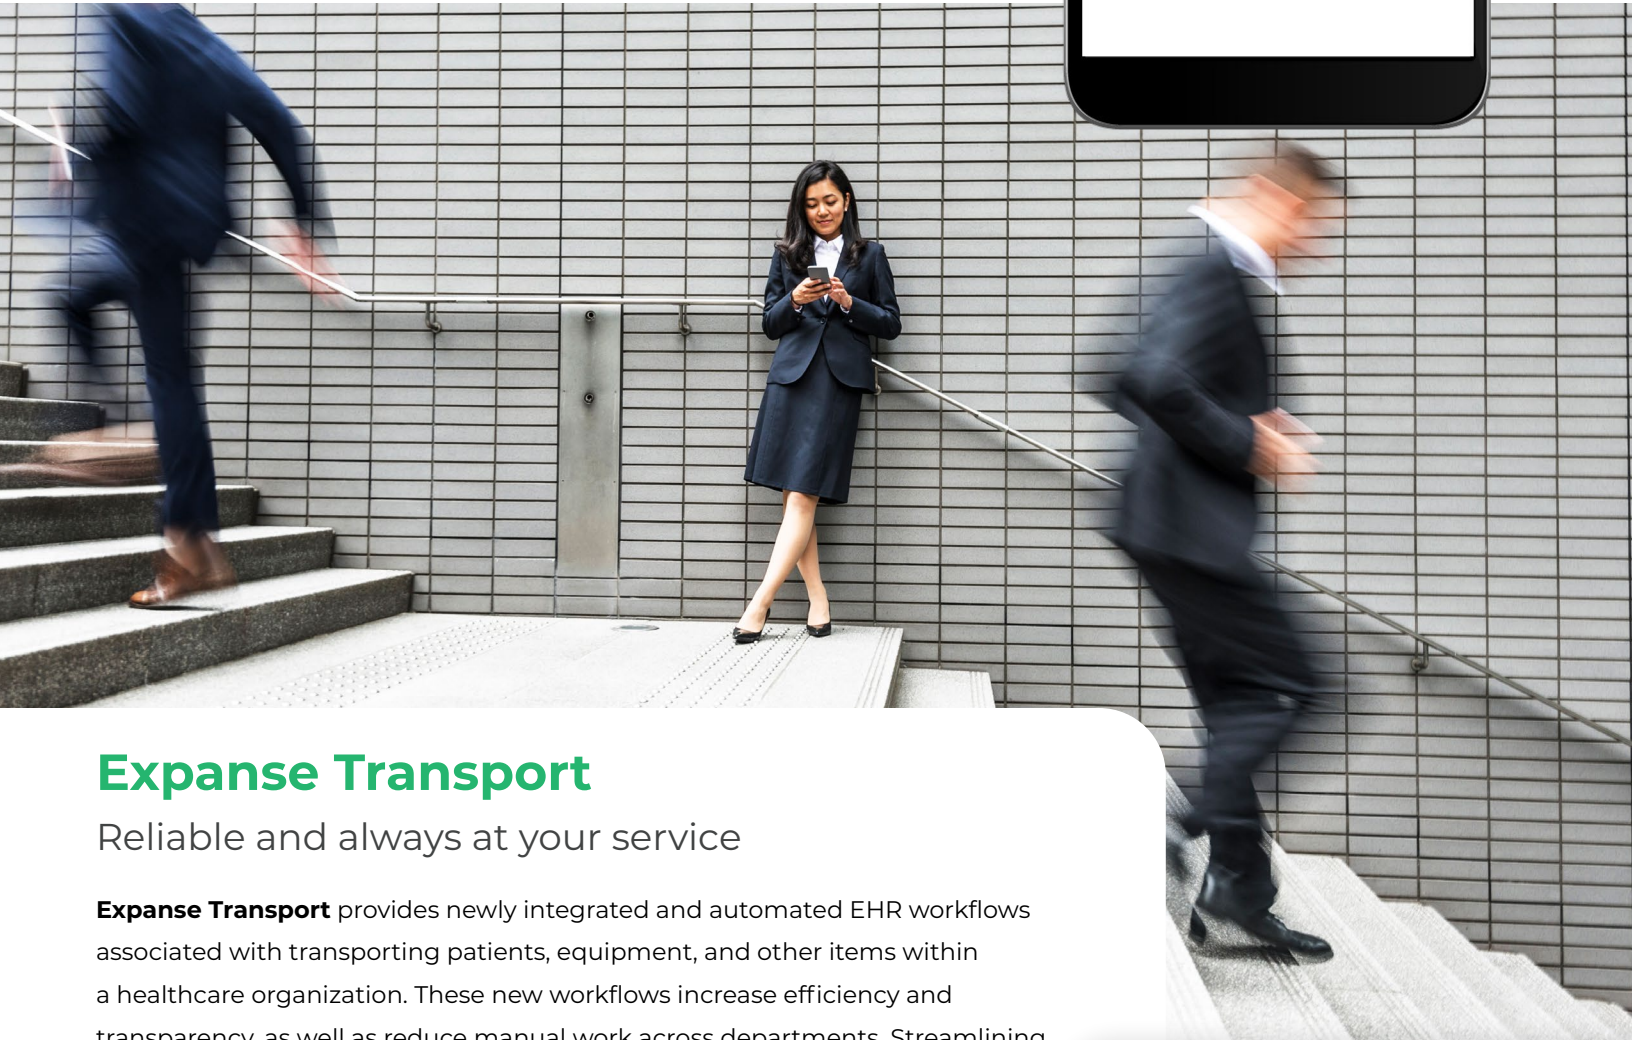

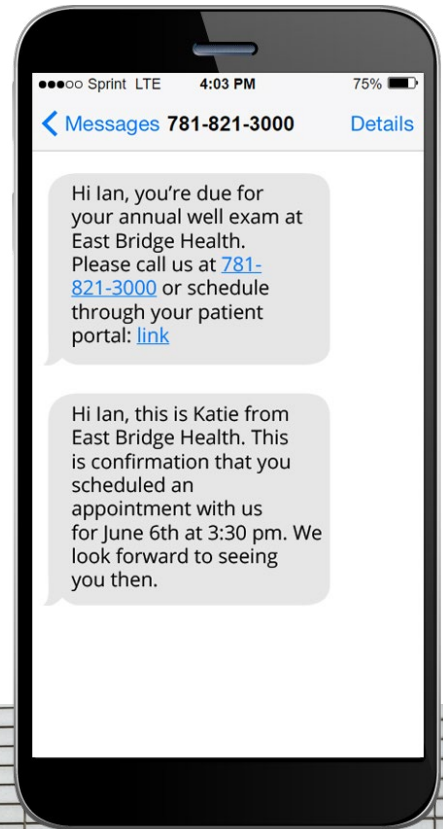

Gain a scalable solution that is stable, safe, and secure on cloud platforms such as the Google Public Cloud, and can grow with your organization's needs.

Expanse Patient Connect

Communicate at the speed of life

With **Expanse Patient Connect**, healthcare organizations can build a community of engaged, loyal consumers — while also increasing organizational efficiency via a modern, web-based EHR solution.

“Close the last mile” to patients wherever they are, with proactive communication through their preferred channel, including text, email, and phone. Expanse Patient Connect automates bi-directional appointment-related communications across over 100 language translations, reducing no shows and freeing up staff for high quality patient interactions. Engage targeted populations to close care gaps, manage chronic diseases, and promote wellness with actionable messages for healthier patients and a healthier bottom line.

Expanse Transport

Reliable and always at your service

Expanse Transport provides newly integrated and automated EHR workflows associated with transporting patients, equipment, and other items within a healthcare organization. These new workflows increase efficiency and transparency, as well as reduce manual work across departments. Streamlining transport processes and communication improves patient throughput, while positively impacting care and satisfying the needs of your hospital staff.

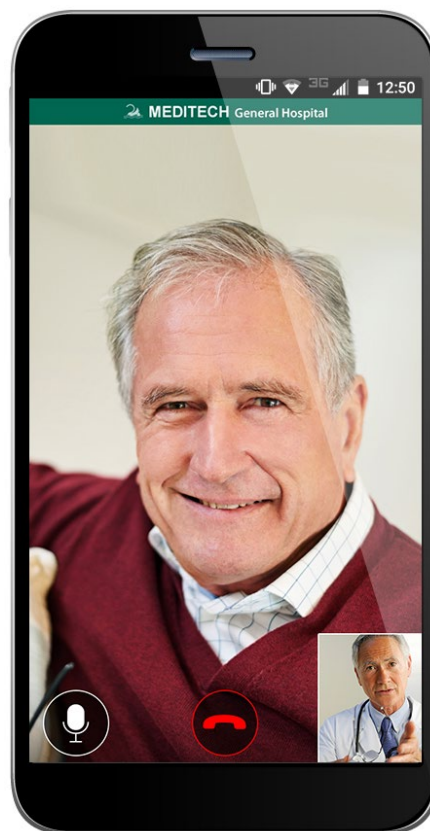

Virtual Care

Care wherever you are

MyHeathHub enables patients to have **Virtual Visits** with their providers — at their convenience and from the privacy of their homes or other off-site locations — using their own computers or mobile devices. A unique benefit of MEDITECH's Virtual Visits is that patients are able to connect with their own providers, who are familiar with their problems and care needs, as opposed to outsourced or on-call physicians.

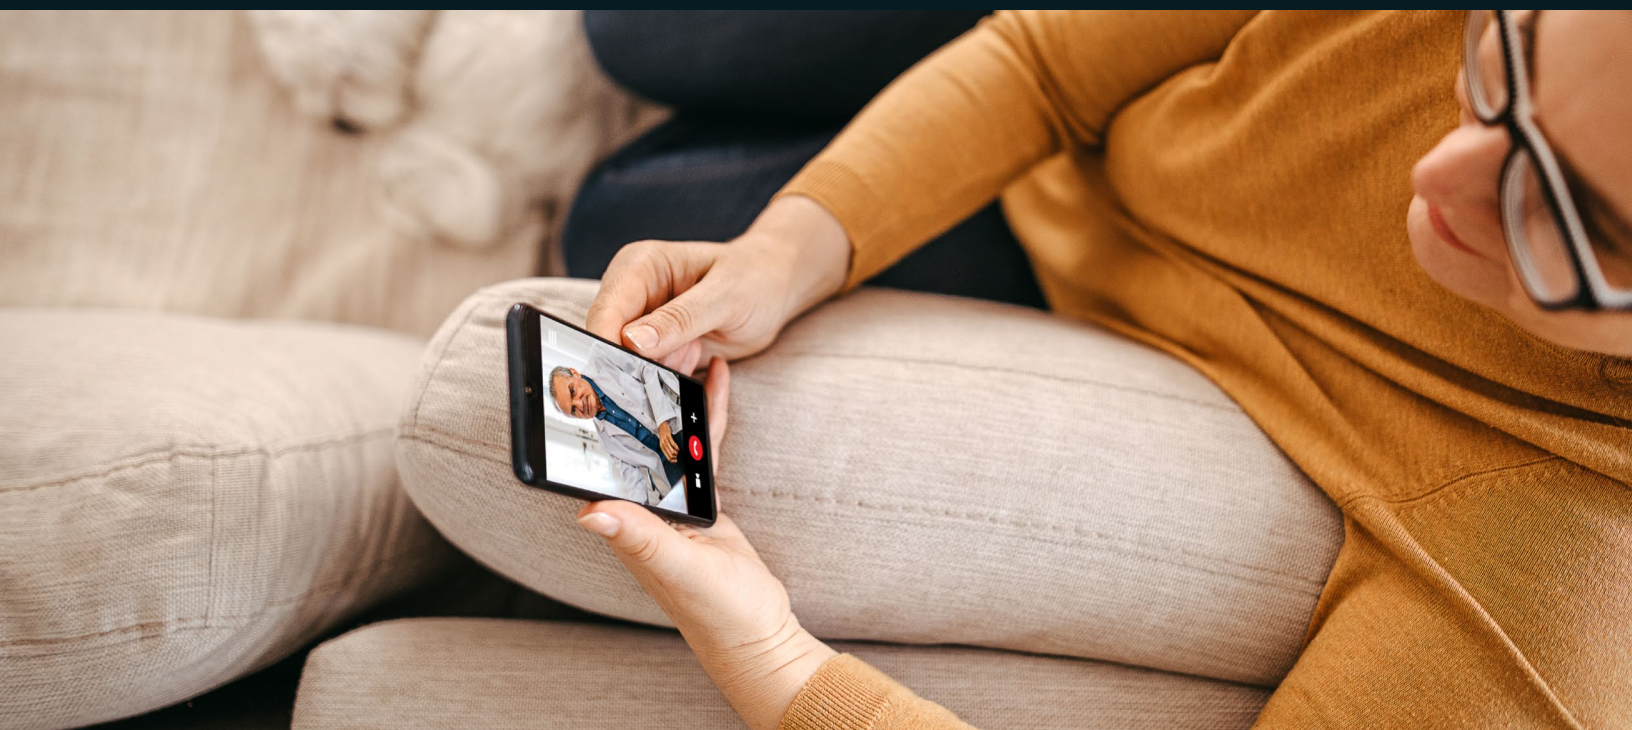

Virtual On Demand Care allows patients as well as consumers who've never been seen before to have access to urgent, virtual care on demand from your providers via your website. New patients are automatically enrolled in the patient portal, giving them a connection to your organization. Virtual On Demand Care helps healthcare organizations to grow their business by attracting new patients.

“Now we have integrated ambulatory **video visits** up in Expanse. The EMR does instantaneous registration, spawns the visit documentation, and establishes the bidirectional video link. The remarkable thing is, **it only took a week to set up.**”

William Dailey, MD, MS, MSMI, CMIO
Golden Valley Memorial Healthcare

“

“Delivering healthcare throughout remote areas can be challenging, and we strive to support our clinicians with the tools and information they need to provide exceptional healthcare. We believe **MEDITECH's High Availability SnapShot** is a cost-effective and valuable tool that will give us the ability to **access important patient information** during unexpected downtimes.”

Dave Nixdorf, Director of Support Services
Frances Mahon Deaconess Hospital

“

High Availability SnapShot

Prepare for the unexpected with a snap in time

With **High Availability SnapShot**, healthcare organizations gain cloud access to patient information during planned or unplanned events such as downtime. Providers have immediate access to home medications, allergies, mental status, social history, orders, vital signs, immunizations and more, through a copy of patient data located in a secure Google Public Cloud. Our solution decreases the chaos of unplanned downtime and reduces stress on the clinical team, which leads to a better overall patient experience.

“MEDITECH Cloud Platform solutions ensure more effective communication, better continuity of care, and a personalized experience for providers. These tools also help health systems manage the movement of patients and equipment within the organization, efficiently deploy new upgrades, and limit the impact of unplanned downtime so their clinicians can provide patients with **with superior care.**”

Expanse Now

Mobility app for physicians

Expanse Now empowers physicians to manage everyday tasks and coordinate care using our mobile app on a smartphone. Clinicians have the information they need, wherever they are, using technologies they have become accustomed to in their daily lives.

Expanse Now is seamlessly integrated with MEDITECH Expanse, allowing tasks and messages to flow between workloads and the app in real-time. Physicians can use the app to manage tasks, view and send messages, complete prescription refill requests, create reminders, and more.

“**Expanse NOW** enables our physicians to monitor and respond to workload messages from **wherever they are.**”

Clark Averill, CIO St. Luke's Health
