Healthcare organizations of all sizes can now increase the power and usability of their EHRs with MEDITECH Cloud Platform, our new bundle of scalable solutions that extend and enhance your EHR to include multiple specialties, connect remote sites, and keep patient data secure through a cost-effective subscription model.

With **Expanse Patient Connect, Virtual Care, High Availability SnapShot** and **Expanse NOW**, you will experience a quick deployment, featuring an agile development environment so you can meet your goals efficiently.

These solutions leverage Google Cloud capabilities including compute, storage, data and analytics, and security and identity management solutions, alongside existing on-prem solutions, to provide high availability and continuity of care in a secure and scalable service. Through our cloud-based service, these resources can be easily accessible to critical care staff and improve healthcare continuity across MEDITECH-powered healthcare organizations.

---

**Possibilities Realized**

**Patient & Provider Satisfaction**

Attract top physicians with sophisticated tools that are convenient and as easy-to-use as their smartphones.

**Thriving Organizations**

Lower your overhead through flexible subscription pricing. Focus resources on your core business, and spend less energy managing servers and having to pay for unused hardware space.

**Peace of Mind**

Gain a scalable solution that is stable, safe, and secure on cloud platforms such as the Google Public Cloud, and can grow with your organization’s needs.
Expanse Patient Connect
Communicate at the speed of life

With Expanse Patient Connect, healthcare organizations can build a community of engaged, loyal consumers — while also increasing organizational efficiency via a modern, web-based EHR solution.

“Close the last mile” to patients wherever they are, with proactive communication through their preferred channel, including text, email, and phone. Expanse Patient Connect automates bi-directional appointment-related communications across 19 language translations, reducing no shows and freeing up staff for high quality patient interactions. Engage targeted populations to close care gaps, manage chronic diseases, and promote wellness with actionable messages for healthier patients and a healthier bottom line.
Virtual Care
Care wherever you are

MEDITECH’s Patient and Consumer Health Portal enables patients to have Virtual Visits with their providers — at their convenience and from the privacy of their homes or other off-site locations — using their own computers or mobile devices. A unique benefit of MEDITECH’s Virtual Visits is that patients are able to connect with their own providers, who are familiar with their problems and care needs, as opposed to outsourced or on-call physicians.

Virtual On Demand Care allows patients as well as consumers who’ve never been seen before to have access to urgent, virtual care on demand from your providers via your website. New patients are automatically enrolled in the Patient Portal, giving them a connection to your organization. Virtual On Demand Care helps healthcare organizations to grow their business by attracting new patients.

“Now we have integrated ambulatory video visits up in Expanse. The EMR does instantaneous registration, spawns the visit documentation, and establishes the bidirectional video link. The remarkable thing is, it only took a week to set up.”

William Dailey, MD, MS, MSMI, CMIO
Golden Valley Memorial Healthcare
“Delivering healthcare throughout remote areas can be challenging, and we strive to support our clinicians with the tools and information they need to provide exceptional healthcare. We believe MEDITECH’s High Availability SnapShot is a cost-effective and valuable tool that will give us the ability to access important patient information during unexpected downtimes.”

Dave Nixdorf, Director of Support Services
Frances Mahon Deaconess Hospital

High Availability SnapShot
Prepare for the unexpected with a snap in time

With High Availability SnapShot, healthcare organizations gain cloud access to patient information during planned or unplanned events such as downtime. Providers have immediate access to home medications, allergies, mental status, social history, orders, vital signs, immunizations and more, through a copy of patient data located in a secure Google Public Cloud. Our solution decreases the chaos of unplanned downtime and reduces stress on the clinical team, which leads to a better overall patient experience.

“Having an emergency strategy to Avera has always been essential, especially being located in rural areas when our systems may experience issues because of unpredictable weather interrupting technology. This addition to our downtime strategy strengthens our ability to support our community and care teams in any situation, and allows us to use technology to help provide patients with superior care.”

Dr. Andy Burchett, CMIO of Avera Health
Expanse Now
Mobility app for physicians

Expanse Now empowers physicians to manage everyday tasks and coordinate care using our mobile app on a smartphone. Clinicians have the information they need, wherever they are, using technologies they have become accustomed to in their daily lives.

Expanse Now is seamlessly integrated with MEDITECH Expanse, allowing tasks and messages to flow between workloads and the app in real-time. Physicians can use the app to manage tasks, view and send messages, complete prescription refill requests, create reminders, and more.

“Expanse NOW enables our physicians to monitor and respond to workload messages from wherever they are.”

Clark Averill, CIO St. Luke’s Health
