- TRAVERSE: IDM Reports Outbound
- TRAVERSE: MEDITECH to OV EHR
- TRAVERSE: Results Out (Lab/BBK/Mic/Path)
- Virtual Assistant Integration

**The above list is a sample of what is included in Expanse. A comprehensive list will be provided upon request.*

Embedded Standard Content and Best Practices from Trusted Sources

MEDITECH is the only EHR vendor that embeds First Databank (FDB) OrderKnowledge strings within the ZynxInside content.

Within MEDITECH Expanse, DrFirst prescription management tools streamline complex workflows for providers.

MEDITECH uses FDB APIs for both ambulatory and acute settings.

MEDITECH's embedded use of Intelligent Medical Objects' (IMO) expansive terminology allows physicians to search problems directly within their workflow, using terms they are familiar with and aligning those terms with clinically accurate code sets.

MEDITECH collaborates with the National Decision Support Company (NDSC) to streamline the licensing and activation of features required to comply with imaging appropriate use criteria (IAUC).

Tackle Top Healthcare Priorities

Our Toolkit Library includes guidance for these high-priority conditions:

Hypertension Management

Antimicrobial Stewardship
