

Send medical images directly to the EHR

Expanse Cam, MEDITECH's photo app, lets clinicians efficiently capture and upload medical images directly into their documentation using the built-in camera on their device.

Fully encrypted and HIPAA- and security-compliant, Expanse Cam supplements documentation with vivid clinical images, saving time on written descriptions while enhancing care quality and improving patient satisfaction.

With Expanse Cam, providers can:

- ▶ Launch their camera app from the Expanse EHR
- ▶ Take a photo via their handheld device
- ▶ Securely send the image to the EHR without saving to the device
- ▶ Embed the photo directly into the chart

Expanse Cam gives our providers the ability to document accurately and quickly — it's much easier to have a picture than a description.

And if a patient has a follow-up the next day, it's a real challenge for providers to accurately describe the issue within that time. Expanse Cam cuts our acquisition and sharing of relevant clinician information by at least half — or more. ”

Dr. Louis Harris, CMIO
Citizens Memorial Hospital

◆ Expanse Cam is available for download with Expanse and MEDITECH Cloud Platform.

◆ Mobile devices require iOS 10+ or Android 5+.

Contact your IT staff if you have questions about the availability of Expanse Cam.
