HOME CARE SOLUTION

Bringing collaborative, task-driven care home

As more care is delivered in patients' homes, your population health strategy will depend on making that data accessible and actionable throughout your organization. MEDITECH provides you with extensive Home Health, Hospice, and Private Duty solutions to meet all of your administrative, clinical, billing, and reporting needs.

HOME HEALTH

At the agency or patient home, our Home Health solution gives your staff mobile, immediate access to the tasks and tools they need to successfully treat patients.

- Schedule visits, procedures, and assessments—such as OASIS-D/C2 Time Points—in accordance with regulations.

- Safely order, document, and reconcile medications.

- Perform comprehensive Service Plan review to produce a Plan of Care for physician signature.

- Track all claims, charges, and denials to achieve zero balance and lower A/R days.

- Generate reports to extract and compile meaningful data.

HOSPICE

Whether installed independently or with our Home Health line, MEDITECH's Hospice solution helps staff provide care and comfort to your patients.

- Designate benefit periods based on prior hospice utilization, with automatic tracking of future periods.

- Coordinate hospice admissions and track the timely completion of CTIs, NOEs, and other documents.

- Document compound medications.

- Promote a collaborative and fluid IDT process through automatic patient placement, timed reminders, attendance tracking, and IDT summary generation.

- Process bills with automatic tracking and shifting of care level and service location.
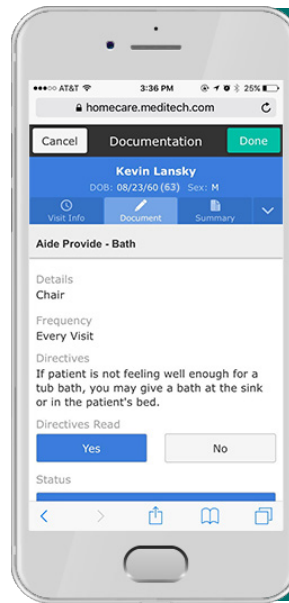

PRIVATE DUTY

For agencies that accept patients using private insurance, add our Private Duty solution designed to bypass unnecessary regulatory requirements.

- Toggle between solutions to manage patient populations and their diverse payment methods.

- Gather relevant intake information to streamline billing down the line and receive faster reimbursements.

- Admit patients over the phone to save administrative time.

- Operate daily workflows aided by simplified documentation that avoids unnecessary regulatory and billing requirements.

- Efficiently document final instructions at the time of discharge.

TELEHEALTH AND TELEMONITORING

Robust telehealth integration keeps patients active participants in their care, while also helping to prevent complications, readmissions, or ER visits. Effortlessly adhere to HIPAA regulations when communicating with patients via virtual appointments.

MEDITECH's Telehealth Home Connect, our remote patient monitoring (RPM) solution, connects patients with their home care providers from their homes. Through integration with telehealth devices, patient-captured vital signs — blood pressure, heart rate, weight, and blood glucose readings — flow to the EHR and alert clinicians of potential issues in real time.

Deliver exceptional care from anywhere and any device.

SIMPLIFIED DOCUMENTATION

Complete documentation by merging agency-defined and individual workflows. Field categorization, or fact tailoring, allows staff to customize their documenting screen and eliminate unnecessary fields for faster note taking. Access patient info within Home Care's web-based platform and easily navigate between patient charts, schedules, and team communication.

HOME CARE INTEGRATION

Coordinate with MEDITECH Expanse to ensure patient care remains consistent across care settings.

Orders Related to Physician Communication

Physicians communicate directly with Home Care on orders, care plans, and signature requests.

Acute Alert Notifications

Hospital and ED alert notifications pass to Home Care when active patients arrive.

General Ledger

Daily and month-end transactions populate the GL.

Health Information Management (ADM/MRI)

Home Care referrals carry forward demographic, insurance, and contact information — as well as allergies and medications. Records are linked to support ongoing data exchange.

Electronic Health Record

Visit notes, vital signs, and other documents are viewable in the EHR. Hospital physicians can receive and electronically sign interim orders and documents (plans of care, 485s).

HOME HEALTH, HOSPICE, AND PRIVATE DUTY
