Take Command

MEDITECH and Nuance have collaborated to integrate artificial intelligence and voice-driven navigation into the Expanse EHR, allowing physicians to use simple and intuitive voice commands to access key areas of the patient chart.

Physicians can now interact with their EHR just like they do with other devices they use outside of work.

Focus on the Patient

Nuance's sophisticated conversational dialogues and healthcare skills — combined with MEDITECH's advanced web-based EHR tools — enable Expanse Virtual Assistant to streamline high-value clinical tasks, ensure quality, and save physicians time so they can focus on their patients.

Personal interaction between providers and their patients is the key driver for both physician and patient satisfaction. Expanse Virtual Assistant helps providers get back to doing what they enjoy doing — caring for their patients.

Empower Physicians

Expanse Virtual Assistant is another clinically sophisticated tool from MEDITECH that leverages AI to efficiently locate information in patient records, ushering in a new era of digital transformation.

Physicians see their efficiency go up and cognitive load go down as they “talk to” their EHR, instead of typing, pointing, and clicking to navigate and search for information.

Features include the ability to access:

- Rounding List
- Lab Results
- I/O 24-Hour Summary
- Vital Signs
- Current Medications
- Problems
- Allergies
- “Search Chart” Command (e.g., last EKG, last colonoscopy.)

“OK, MEDITECH...”

“Open my rounding list.”

“When was the last EKG?”

“Show me the most recent HBAIC.”

“What are my patient's current medications?”
