Nursing Solutions

Innovative Options

*Increase mobility, decrease cognitive burden, & **save money** — all at once*

Nurses should have options — because there's no one-size-fits-all solution for every scenario. You shouldn't need to push a bulky WOW into the room for every aspirin request, and a mobile device alone may not make sense for the full morning medication rounds. Expanse Patient Care is about approaching each task with the best tool for the job. We're relieving cognitive burden and sparing resources for higher quality care.

Here are some use cases that demonstrate how MEDITECH provides the flexibility nurses need:

Start of shift...

Easy, Accurate Handoffs

Start the shift with a tablet. See the big picture with a robust report from the off-going nurse.

Point of Care

Use a smartphone to record vitals and administer meds effortlessly at the bedside.

Med Pass

Bring a smartphone to administer a medication, or rely on the capacity of a WOW to make regular medication rounds with ease.

Keep moving forward

“We could see Expanse Point of Care’s potential and the benefits of having a pocket-sized device staff can easily take into a patient’s room without disruption. It would also untether our clinicians from their WOWs and enable them to spend more time engaging with patients at the bedside.”

“

**Teresa Fortune, Clinical Operations Manager
South Okanagan General Hospital**

Mid-shift

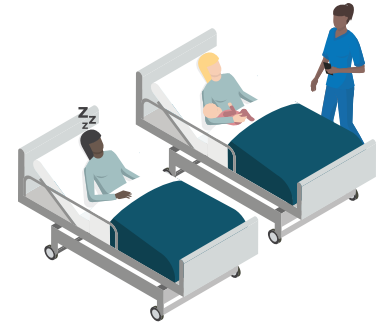

New Patient from ED

Get up to speed with a quick chart review on a tablet before the patient even arrives.

Maternity

Preserve the calm by keeping the commotion out of baby's room.

Quiet Care

Grab a POC device to record vital signs — without disturbing mother or baby.

Designed with nurses, preferred by nurses

When nurses practice with the smart devices they already know and love, it's a **win-win** for them and their patients.

End of shift

"When you have a second...?"

Complete patient requests on-the-fly, and pivot back to the task at hand.

Patient Discharge

When patients are ready to go, nurses grab a tablet to review with them all they need to know before leaving.

Warm Handoff

Incoming and outgoing nurses consult while keeping their focus on the patient.

MEDITECH's innovative patient care solutions empower nurses by letting them select the best tool for the job. They leave their shifts knowing they **provided real, hands-on care** — boosted by **agile technology** that stays out of the way.

Nurse mobility pays for itself at KDMC

Moving to a web-based solution allowed King's Daughters Medical Center to reduce its third-party network licensing costs by over two-thirds, saving more than \$40,000 annually. KDMC leadership expects the savings to go up as they eliminate additional servers.
