Expanse Oncology *The Next Evolution of Expanse*

Modern, Web-based, and Specialty-Driven

Improve clinical efficiency and decision-making with Expanse Oncology, our full, outpatient solution. Oncologists use specialty-specific workflows that provide mobile access to patient data, decision support, and one centralized patient record for safer, more coordinated care.

As cancer diagnoses continue to grow, technological advancements could lead to a decrease in mortality rate and an increase in survivorship.

39%

Projected increase in diagnoses worldwide by 2040¹

1.5%

Average decrease in U.S. death rate per year, 2008-2017²

24%

Projected increase in U.S. cancer survivors by 2030¹

A Personalized Physician Experience

Tailored to your oncologists, so they get more done in less time.

Individualized views of patient information

Familiar web- and touch-based navigation

A mobile workflow

More Than Just Bells and Whistles

Specialized content informs decision-making, ensuring your oncologists deliver safe, quality care. Embedded, industry-standard regimen protocols and content are provided out-of-the-box, at no additional charge.

AJCC TNM

8th edition staging protocols offer decision support for cancer care planning.

350+

NCCN chemotherapy regimens reinforce organizational standards.

Diagnosis-driven

Patient flowsheets and order sets standardize best practices.

Coordinate Care from Diagnosis Through Survivorship

Teresa's Story

Teresa's story doesn't begin with diagnosis and end with remission. As a fully integrated EHR, Expanse Oncology gives oncologists the whole patient story, helping them to make more informed decisions.

Diagnosis

Diagnosed with breast cancer, Teresa is referred to your organization's clinic. All diagnostics, treatment histories, and vitals are available in the chart. Cancer staging is performed electronically, embedded within the chart, and linked with her diagnosis on the problem list.

Treatment

Teresa's care team manages her care through specialized oncology workflows and multidisciplinary documentation. If she's admitted to the hospital or arrives in the ED, her physicians see her full cancer regimen.

Survivorship

The care team automatically creates a survivorship care plan and protocols from details captured in Teresa's EHR. Real-time registries use treatment histories and demographics to drive future health maintenance items, ensuring a healthier tomorrow.

Ease Your Patients' Burden

The maze of physicians and specialists involved with cancer care can be overwhelming. An EHR that goes with patients simplifies their experience.

Complete records go where patients go — no need to repeat their history.

Enterprise scheduling coordinates appointments across care settings to reduce travel.

A single patient portal clearly displays appointments across specialists.

Keep Your Practice Running Smoothly

Our full, outpatient solution includes a centralized business office that combines hospital and practice charges on one billing statement. Other components include:

Flexible Infusion Chair Management

Optimize infusion chair utilization with color-coded patient scheduling grids.

Quality Vantage Dashboards

Analyze real-time regulatory goals and metrics and their impact on reimbursement.
