SERVICES

Specialty Services: Clinical Decision Support

The MEDITECH EHR system provides clinicians with sophisticated tools to help deliver safe, quality healthcare, while driving clinical improvement. Integrating Clinical Decision Support (CDS) into the clinical workflow is a way in which the MEDITECH system enables customers to enhance provider workflow, improve patient care, promote better outcomes, and reduce costs. MEDITECH's dedicated consultants will work with your organization to optimize your use of clinical decision support while minimizing alert fatigue.

Rules Support

This program provides your organization with an experienced MEDITECH Expanse Clinical Rules Consultant to further optimize existing, or create new, clinical decision support rules.

Impact: Clinical decision support interventions, such as rules, are designed to help improve patient care, meet regulatory requirements, address high-priority health conditions, and satisfy HIMSS Analytics and other industry initiatives. By integrating well-designed and thoroughly tested rules into your EHR, clinicians can spend more time on patient care, engagement, and education.

Benefits:

- Dedicated Expanse Clinical Rules Subject Matter Expert/Dictionary Architect for the following applications:
 - PCS/MAR, PHA, Clinical Documentation, and Ordering
- A flexible option that provides an agreed upon number of hours of support per month
- Ability to use a MEDITECH consultant on multiple projects at once
- Can be used to supplement, or temporarily fill, IT resources to assist with rule management
- Appropriate handoff education provided as part of engagement closing

Estimated Timeframe: Varies
