Expanse Transport
Reliable and Always at Your Service

Expanse Transport provides newly integrated and automated EHR workflows associated with transporting patients, equipment, and other items within a healthcare organization. These new workflows increase efficiency and transparency, as well as reduce manual work across departments. Streamlining transport processes and communication improves patient throughput, while positively impacting care and satisfying the needs of your hospital staff.

Key features of Expanse Transport include:

Transport Request
Submit transport requests for patients and items/equipment, with options for scheduling future trips or returning trips.

Integration with Application & User Workflows
Enter transport requests and view status updates from the Patient Care Status Board, ED Tracker, Surgical Services, Bed Management, and Radiology workflows.

Real-time, Interactive Centralized Tracker
Gain insights through real-time monitoring of active transport requests, visual indicators, and staff availability/activity.

Auto Assignment of Transport Requests
Leverage the option for your system to automatically assign transport trips to transporters.

Native App for Mobile Devices
Give transporters mobile access to receive trip assignment notifications, one-tap status updates, options for delaying or canceling trips, and availability updates.

Staff Productivity and Statistical Reporting
Access data such as number of assigned/completed trips, canceled/delayed trips, and average trip turnaround times.

Improve both the user and patient experience with Expanse Transport: a mobile, modern solution that facilitates smooth, timely transitions. Your transport staff and dispatchers will be able to work more efficiently, without relying on third-party systems or cumbersome manual processes.

Available for Apple iOS and Android smartphones via MEDITECH Cloud Platform
