

MEDITECH EXPANSE

CONNECTING YOUR CARE COMMUNITIES WITH TRAVERSE

There is no single formula for achieving interoperability; that's why we've designed Expanse to be a fully interoperable platform. With Traverse, included in Expanse, you get a complete, EHR-to-EHR interoperability solution, so now no matter how you choose to connect, patient data is just a tap away.

From local and regional connections, to enrollment in nationwide data exchange services, Traverse can help you to securely share data between clinicians and patients throughout the entire healthcare landscape.

EHR-to-EHR Link

- Your clinicians can open other EHRs to view the patient's chart for a complete history of care.
- Shared sign on credentials between EHRs eliminate additional taps or data entry for authentication.
- Clinicians seamlessly access the patient's chart — eliminating MPI searches for quick, convenient access to the data required for safe, informed care.
- Patient chart access to MEDITECH's EHR is available for clinicians using other EHRs.

Share Clinical Data

- Embedded workflows provide access to clinical data from HIEs or other exchange networks for improved care coordination and delivery.
- Expanse enables your clinicians to close care gaps and see the full patient story at the point of care, with access to patient summaries, discharge summaries, and referral notes.

- Using a style sheet, physicians can personalize how data is sorted and displayed, and can jump to a section of a patient summary with a single tap to align the patient's story with their workflow. You can incorporate key discrete clinical data — medications, allergies, immunizations, and problems — into the patient health record as actionable data.
- Within Expanse's workflows, clinicians can receive real-time notifications that their patients have been seen in non-scheduled care settings.
- Using your CommonWell Connected™ platform, you can easily share data with thousands of clinicians in their national network, from the practice across town to the academic medical center states away.
- To extend this reach further, CommonWell® Health Alliance provides the opportunity to connect to Carequality, supporting the exchange of patient information with nearly all EHR vendors.

Exchange Clinical Orders and Results

- You can receive and incorporate a variety of orders (lab, radiology, nursing, pre-op, and more) from clinicians throughout your community.
- As tests are performed, results link back to the originating EHR for uniform data exchange with neighboring practices, skilled nursing facilities, and specialty providers. As a result, the complete patient record always follows the patient, wherever they go.
- Expanse's automated MPI smart-search capabilities match up existing patient records and update demographics.

MAKING MEANINGFUL CONNECTIONS

Coordinate Care In Your Community and Beyond

Each EHR holds a different piece of the puzzle. See the full patient journey by connecting across the healthcare landscape, from the practice across town to the academic medical center states away.

- **HIEs**
Access clinical data from HIEs or other exchange networks embedded in your workflow.
- **Commonwell® Health Alliance**
Share data with thousands of clinicians nationwide using the CommonWell Connected™ platform.
- **Carequality**
Extend your reach to nearly all EHR vendors through CommonWell's bridge to Carequality.

Referral Communication

Know all about your patients the moment they arrive. See where they've been and follow where they're going to close gaps in care.

- Review patient summaries, discharge summaries, and referral notes, embedded in your workflow.
- Pull discrete and actionable clinical data into the patient's record, including medications, allergies, immunizations, and problems.
- Launch directly into patient records from affiliated practice EHRs with no separate sign-on required.

Emergency Care

Get up to speed quickly, with real-time data that saves both clicks and lives.

Patient Arrival

- Review and include external medical information into the Expanse chart.
- Launch into affiliated practice charts to see the complete picture.

Patient Departure

- Send and receive real-time notifications for those patients seen in ED or urgent care settings.

Exchange Clinical Orders and Results

Work together with neighboring practices, skilled nursing facilities, and specialty providers to seamlessly exchange orders and results (lab, radiology, nursing, pre-op, and more).

Order sent to receiving facility.

Automated MPI smart-search capabilities match up existing patient records and update demographics.

Results link back to originating EHR for uniform data exchange.

MEDITECH's Interoperability solutions help you see the full patient story, wherever they go, providing a safer, more convenient experience for your patients and staff.
