Doctors' Hours

Expanse Virtual Assistant

Presenter

Steven Jones, MD, MPH

MEDITECH Facilitators

Rebecca Lancaster, Senior Manager, Product Management, Strategy Division

Dan Lade, Software Designer, Product Development Division

Synopsis

Virtual Assistant is a form of artificial intelligence that allows providers to speak naturally to a device, navigate an EHR, search for clinical data and place orders. Virtual Assistant will help augment the MEDITECH EHR and provider and even more intuitive user interface in which a provider can interact. This user interface will further help promote the mobility of the Expanse EHR and the provider's utilization of mobile devices such as tablets.

In this session, we will demonstrate the Virtual Assistant's capabilities in our chart. We will also share upcoming functionality that will allow the Virtual Assistant to place orders.

Learning Objectives

- Review MEDITECH's virtual assistant strategy and use cases
- Review the functionality that will be available in Chart and Ordering
- See a Virtual Assistant demonstration
- Discuss future use cases for Virtual Assistant

Recommended Enrollment

- Audience - Physicians, CIOs, CMIOs, Physician Champions, Clinicals, Nursing, and IT staff
- Platform - Expanse
