Doctors' Hours

Managing Diabetes with MEDITECH Registries

Presenter

Stephen Tingley, MD, CMIO, Mount Nittany Medical Center

MEDITECH Facilitator

Patrick Derochea, Senior Analyst, Clinical Excellence & Physician Services, MEDITECH

Synopsis

MEDITECH's dynamic Patient Registry solution is an interactive and actionable tool that empowers members of the care team to better manage patients' health. The solution is ideal for chronic condition management, as it organizes relevant information to the patient's diagnosis and provides clinical navigators the opportunity to execute targeted interventions beyond the visit. When carefully coordinated, the same tools that 'feed' the registry can also provide 'just-in-time' clinical decision support to providers during episodes of patient care. Join Dr. Stephen Tingley for a session highlighting Mount Nittany's efforts in leveraging MEDITECH's Registry functionality to improve the management and outreach of their diabetic patient population.

Learning Objectives

- Understand the process for undertaking a quality improvement project focused on chronic conditions
- How to identify and measure goals and achievable short- and long-term milestones
- Synchronize information collection tools in MEDITECH Expanse to support clinical care during visits along with population-level interventions
- How to get help if your organization is interested in starting a similar project

Recommended Enrollment

- Audience - Physicians, CMIOs, Physician Champions, Clinicals, Nursing, IT staff, Clinic Practice Managers, Chronic Care Coordinators
- Platform - Expanse Ambulatory
