

Uniting Care *for the* United Kingdom

MEDITECH

Unified care teams. Automated pathway management. Shared patient records. Imagine what you can accomplish with one centralised system. MEDITECH provides a fully integrated Patient Administration System (PAS) and Electronic Patient Record (EPR) designed to help healthcare organisations better coordinate their patients' ongoing treatments and maintain a continuous plan of care between various inpatient and outpatient settings.

Electronic Patient Record

Your patient records. Available anytime, anywhere—on your PC, smartphone, or tablet. Real-time, discrete, actionable information. Unifying your care teams. Guiding your decisions with best practices. Helping you provide safe and effective quality care. That's the power of MEDITECH's Electronic Patient Record.

Benefits include:

- A single tool for Order Communications and Electronic Prescribing
- Electronic case notes with real-time notifications and result trending
- Customisable and multi-disciplinary clinical documentation
- Workload management desktops, tailored to users' roles
- Coordinated care across departments— including A&E, theatres, critical care, and allied health services
- Integrated solutions for radiology, pathology, pharmacy, and maternity
- Patient access to health records online

Patient Administration System

Manage all components of your patients' Referrals and Pathways. Autobook through Choose and Book integration. Support self check-in through registration kiosks. Centralise the management of bed and ward occupancy. Track pathways, code visits, scan documents, and much more. MEDITECH's Patient Administration System can do it all.

Benefits include:

- 18 Week RTT Pathway tracking with Choose and Book integration and breach notifications
- Centralised booking, including conflict checks, waitlist management, and offer tracking
- Single solution for inpatient and outpatient registration and check-in
- Multi-level MPI searches to support accurate patient identification
- Bed tracking—sortable by room, bed, ward, or service—with forecasting and optimisation
- Clinical coding and case notes management.
- The ability to scan or import outside documents, such as referral letters
- Commissioning Data Sets reporting for A&E, labour and delivery, and critical care

One System. One Goal: Quality Patient Care

Thorough integration between our PAS and EPR forms a natural basis for the advanced clinical alerts and decision support necessary to deliver high quality, cost-effective care. You use one database. Manage one set of shared dictionaries mapped to NHS standards. Sign onto one system. Navigate with a consistent look and feel. And report back to governing bodies using information captured from across the system. Our system unites clinical and administrative staff through their ability to collectively:

Manage Referrals and Pathways

Order and Schedule Follow Up

Share Allergies and Demographics

Automate the GP Letter Process

Coordinate Bed Management
