

Business and Clinical Analytics

DEVELOPMENT BRIEF

MEDITECH is currently developing a Business and Clinical Analytics solution. Business and Clinical Analytics is a browser-based, dashboard reporting tool, designed for C-level healthcare executives to easily monitor and evaluate overall business performance. The solution features intuitive, point-and-click dashboards with drill-down and drag-and-drop capabilities. Executives can view trends and key performance indicators (KPIs) at a glance and pinpoint areas for potential change to drive improvement.

Flexible, Browser-based Dashboards

You can launch our Business and Clinical Analytics solution from any browser—whether on your office desktop, laptop, or tablet. From here, you have secure, complete access to your organization’s business performance, displayed through clean, pixel-perfect dashboard views. To customize views you can select from a broad range of widgets and chart types and then extract, analyze, annotate, and act on the data independent of source and format. No programming skills or analyst assistance are required.

Pre-Built, C-level Dashboards

Our Business and Clinical Analytics solution includes a series of standard, C-level dashboards designed to improve patient care, increase patient satisfaction, and optimize financial performance. Each dashboard targets a specific audience and clearly displays essential information to provide quick answers to big questions. Dashboards are designed to cover your healthcare organization’s key concerns by addressing the following areas:

Clinical/Quality	Financial	Operational
<p><u>Views:</u></p> <ul style="list-style-type: none">• Outcomes Measurement for CMS/TJC core measures and Meaningful Use	<p><u>Views:</u></p> <ul style="list-style-type: none">• Revenue Cycle• Cost Analysis• Overall Financial Performance	<p><u>Views:</u></p> <ul style="list-style-type: none">• Census• ED Throughput• Staffing

Note: The provided views are currently in design. We will be expanding our portfolio of pre-built dashboard views and highlighting additional metrics meaningful to different audiences. They will be released frequently and independent of our traditional service release schedule.

Each dashboard view features a variety of sort filters, selectors, and calculations, as well as KPIs that flag variance-based metrics to warn you when thresholds are surpassed.

With MEDITECH’s Business and Clinical Analytics solution, you can also construct your own dashboard views for further investigation of a particular issue.

Download and Share Data

You can download each dashboard view to various file formats—such as Microsoft Excel, PDF, or ASCII—depending on your needs. You can also email, annotate, print, or share views with your colleagues for collaborative interpretation and issue investigation.

Future development plans will include the ability to automatically distribute these views to particular colleagues based on specific indicators. MEDITECH's Business and Clinical Analytics solution seamlessly delivers your C-level executives useful data for informed, active decision-making.
