

# POWER *Your* ACO with MEDITECH

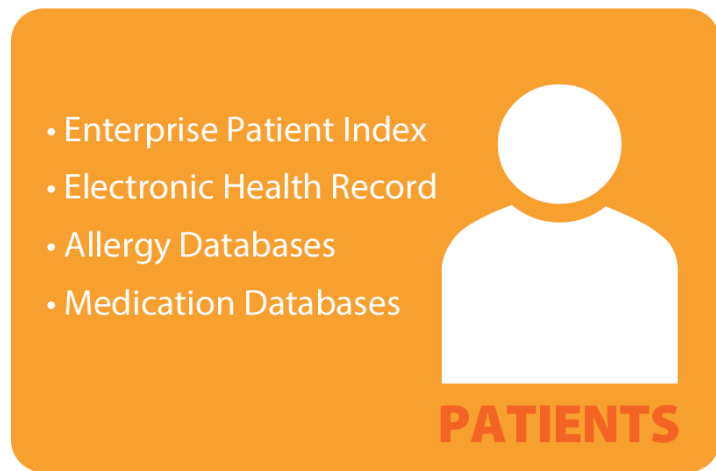

ACOs are blazing trails in new healthcare, and the right technology will play a major role in determining your ACO's success. MEDITECH's fully integrated, fully interoperable EHR provides a strong foundation for engaging your patients, monitoring their care, and protecting your shared savings. Real-time patient data is available to clinicians anytime, anywhere, across your ACO. Embedded reporting functionality and real-time decision support help you address the needs of patient populations in a timely manner. And, with our collaborative approach to implementation, we focus on full user adoption and proficiency from the start to produce positive patient outcomes.

**Stay in control: Blaze trails with MEDITECH.**

## Coordinated Care Begins and Ends with the Patient

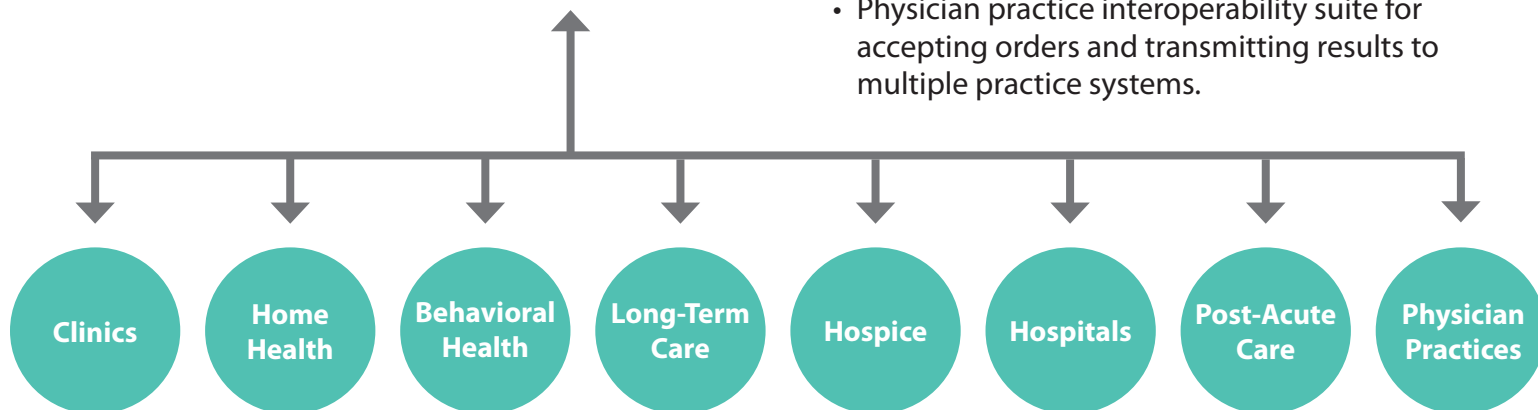

### Integrated at the Core

### Bridging the Gap

Not on one system? Not a problem. With MEDITECH, there is no need to rip and replace existing technology investments. Our Interoperability solutions include:

- CCD and CCDA Exchange with or without a Record Locator Service (RLS)
- Connections to other vendor EMPIs or Client Registries
- Health Information Exchange (HIE): Includes an RLS, EMPI, Healthcare Provider Directory, and CCD Aggregator (in collaboration with Forward Advantage)
- Direct messaging
- Physician practice interoperability suite for accepting orders and transmitting results to multiple practice systems.

## Boost Your Decision-Making with Real-Time Data and Evidence-Based Medicine

Achieve positive patient outcomes with up-to-the-minute information, shared across care settings. Patient trackers, user-defined notifications, and the ability to graph actionable data help clinicians monitor trends in their patients' progress. Clinical decision support prevents errors and leads to more informed decisions. And, evidence-based content—embedded directly in provider workflow—promotes best practices and contributes to higher quality care.

- Duplicate Orders
- Medication Interactions
- Allergy Management
- Graphing Functionality
- Bedside Verification
- Medication Reconciliation
- Notifications/Alerts

## Patient Engagement: Key to Your ACO Growth

Keep patients engaged, focused, and at the center of their own care. Our three-pronged approach to patient engagement helps improve outcomes, as well as ACO Patient Experience quality measures. This patient-centric approach—coupled with positive quality metrics—keeps patients loyal to your organization while recruiting new patients into your ACO.

### EDUCATE THEM.

Patient Education materials and Discharge Instructions help patients understand their conditions and how to manage them.

### ENGAGE THEM.

A Patient and Consumer Health Portal gives patients immediate access to their combined ambulatory and acute health record and direct access to their providers for follow up.

### MONITOR THEM.

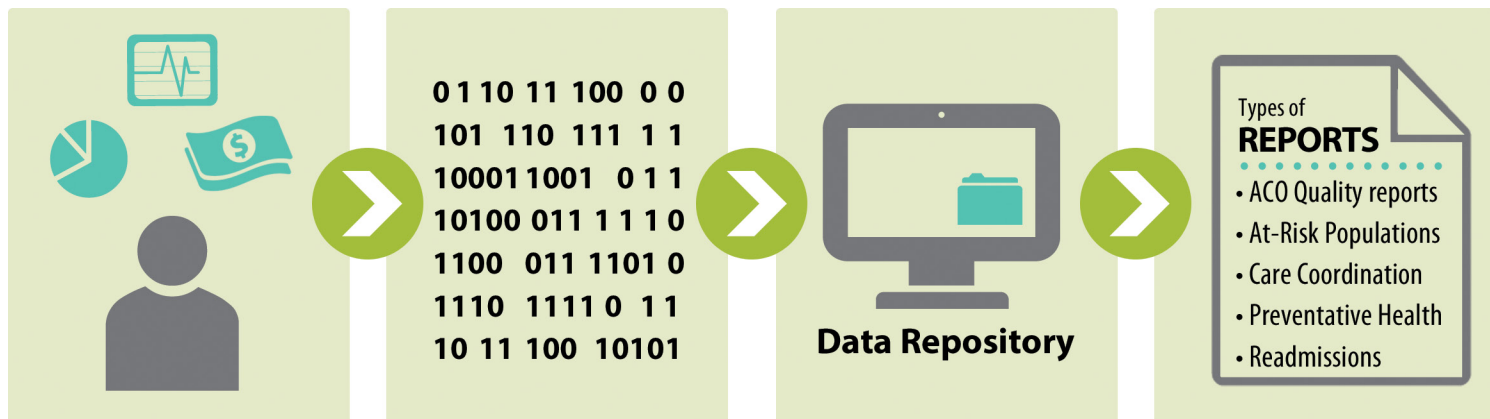

Telehealth helps you monitor patients' vitals between visits, minimizing potential readmissions and visits to the E.D.

# Capture. Extract. Analyze.

## MEDITECH Does It All

We give you the tools you need to compile meaningful reports for internal monitoring, as well as state and federal regulatory purposes. Our Data Repository unites clinical, financial, demographic, and other information from across care settings, including other vendor systems. Information spans your entire patient population, and is reportable using any ODBC-compliant software. These reports help identify at-risk-populations so you can use MEDITECH to refine practices, monitor patients, and prevent avoidable readmissions and ED visits.

## Stop the Leak:

### Prevent Drains on Your Shared Savings

Duplicate procedures, unreimbursed services, liability risks, uncoordinated care—they are all drains on your shared savings. MEDITECH's EHR helps you identify, monitor, and prevent conditions contributing to financial loss while also improving the quality of care. This, combined with an improved patient experience, keeps patients engaged with your ACO—improving coordination and helping control costs. Integration with MEDITECH financials helps you manage resources, secure reimbursement, and pinpoint areas of profit and loss.

#### Leverage Quality to Prevent Loss

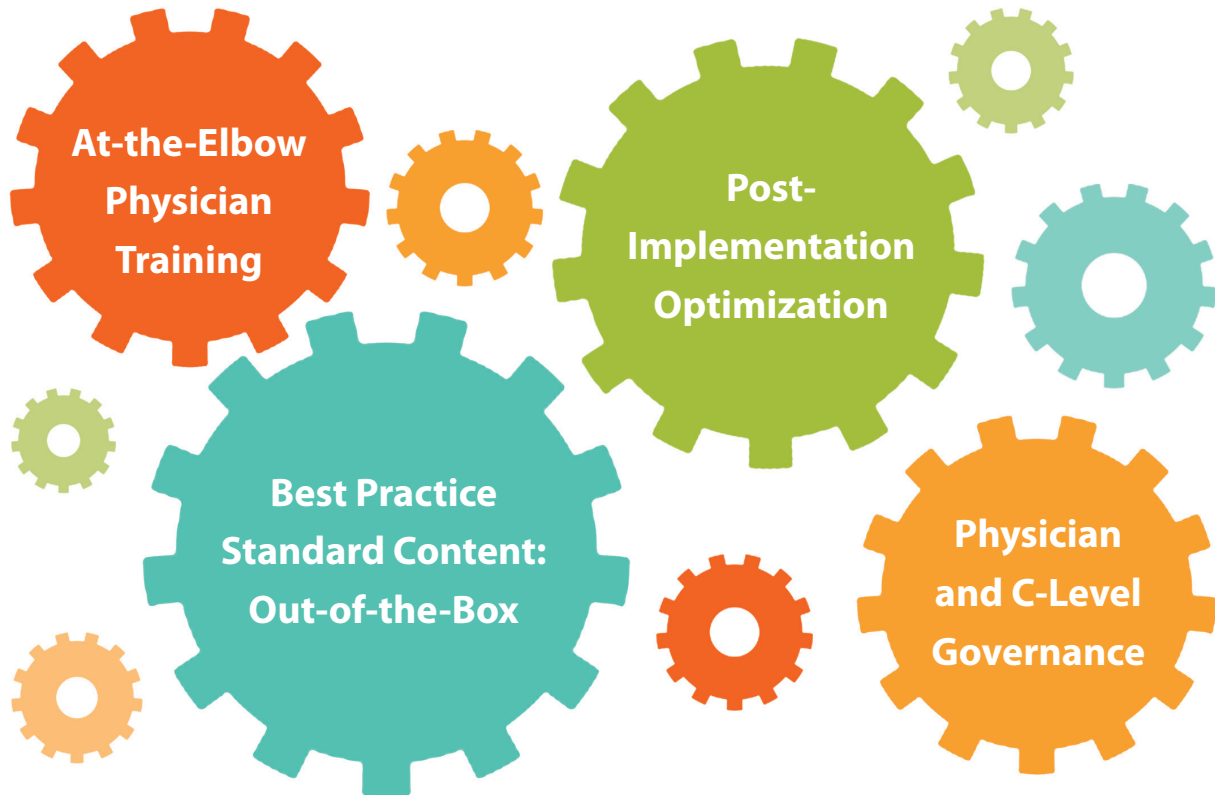

- Flag duplicate or unnecessary orders and procedures.
- Alert schedulers of duplicate or overlapping appointments.
- Enforce documentation standards and care protocols.
- Record conditions Present on Admission and monitor patients at risk for Hospital Acquired Conditions.
- Perform conflict checks to prevent errors and reduce liability risks.

#### Manage Reimbursements and Costs

- Prevent denied claims through conflict, eligibility, authorization, and medical necessity checks.
- Manage the reimbursement cycle from accurate co-pay capture to collection and denial analysis.
- Leverage robust reporting to pinpoint strengths and weaknesses in your revenue cycle.
- Analyze costs by services provided, such as diabetes or congestive heart failure.

# Collaborative Implementation for Optimal Results

Having the right system in place is only half the equation. The best results come when your staff embraces technology and uses it to its fullest potential. MEDITECH's collaborative, multidisciplinary approach to EHR implementation helps your organization unite care departments, promote user adoption, and achieve predictable and positive outcomes.

 Timely and successful implementation ensures positive patient outcomes.
